Education

University of California, Irvine **Dec 2025**
Master of Software Engineering; GPA: 4.0 / 4.0 *Irvine, CA*

Southwest Jiaotong University **Jun 2023**
Bachelor of Engineering in Civil Engineering; GPA: 3.85 / 4.0 *Chengdu, China*

Experience

Member of Technical Staff II (Software Engineer II) **Apr 2026 – Present**
Cohesity, Inc. *Santa Clara, CA*

- Focused on Go-based distributed systems for on-premises and cloud infrastructure.

Applications Programmer **Jan 2026 – Apr 2026**
Institute of Transportation Studies, UC Irvine *Irvine, CA*

- Built a Python RCA agent for long-running simulations that summarized failure logs, extracted stack traces and YAML config context, and generated concise reports, cutting average debug time by 60%+.
- Designed a RAG knowledge base embedding 200+ runbooks and resolved incidents into pgvector on PostgreSQL with source docs in S3, returning cited snippets with 85%+ retrieval accuracy.
- Productionized the tool with structured log parsing, rate limiting, timeouts, fallbacks, and token-cost metrics for safe operation on shared lab machines.

Software Engineer **Sep 2025 – Dec 2025**
Office of Information Technology, UC Irvine *Irvine, CA*

- Built a serverless React/TS GUI on API Gateway for data lake config, replacing manual JSON workflows with a validated Lambda and DynamoDB RPC API.
- Integrated Cognito with UCI Shibboleth (SAML) using JWT Authorizers and custom claim mapping for RBAC.
- Configured API Gateway Mock Integrations for CORS preflight.
- Automated CI/CD with Amplify and GitHub, enabling branch-based deploys and CloudFront global delivery.

Software Engineer Intern **Jul 2025 – Sep 2025**
SubMarts Inc *Irvine, CA*

- Implemented a Java state machine to coordinate transitions across payment, inventory, and notification services, with rollback support on partial failures.
- Built a Redis and gRPC notification service that achieved 99.9% delivery across 100K+ transactions.
- Developed REST APIs with Hibernate for a weighted review ranking feature.
- Reconfigured the AWS infrastructure (EC2 Auto Scaling, Multi-AZ RDS) to handle traffic spikes.

Graduate Student Researcher **Jul 2025 – Dec 2025**
Institute of Transportation Studies, UC Irvine *Irvine, CA*

- Took over a legacy Python transportation modeling codebase and brought it up to a maintainable state.
- Automated the simulation pipeline, bringing full runs from 24 hours down to 30 minutes.

Skills

Languages: Java, Python, Go, JavaScript, TypeScript, SQL, C++, C#, Kotlin

Framework: Spring Boot, Django, FastAPI, Flask, Node.js, Hibernate, React, Next.js, HTML5, CSS3, Tailwind CSS

Cloud / DevOps: AWS (Lambda, EC2, API Gateway, Cognito, Amplify, S3, DynamoDB), Docker, GCP, Azure, CI/CD

Data / Messaging: MySQL, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ

Tools: Git, JUnit, pytest, Linux, RESTful APIs, Agile/Scrum
